4.4 Verify an Issue

Steps:

1. Locate issue with status **RESOLVED**.
2. Select **VERIFIED**.
3. Click **Update Status**.

The screenshot shows a web application interface with a table of issues. A modal titled "Update Issue Status" is open, allowing a user to change the status of a selected issue. The modal contains a "New Status" dropdown menu currently set to "VERIFIED" and an "Update Status" button. The background table lists various issues with columns for ID, Title, Status, Priority, Count, Assigned To, and Update Status. The issue with ID 3, "Issue filter returns delayed results", is currently in a "RESOLVED" state and has an "Update Status" button next to it.

ID	Title	Status	Priority	Count	Assigned To	Update Status
1	Login fails with valid credentials				dev1	Not allowed
2	Dashboard graph not loading	IN_PROGRESS	MEDIUM	1	dev1	Not allowed
3	Issue filter returns delayed results	RESOLVED	LOW	1	dev1	Update Status
4	Payment confirmation screen freezes	OPEN	HIGH	2	dev1	Not allowed
5	Transaction history not refreshing	CLOSED	MEDIUM	2	dev1	Not allowed
6	Notification badge count incorrect	CLOSED	LOW	2	dev1	Not allowed
7	Checkout button disabled after coupon applied	OPEN	HIGH	3	dev1	Not allowed
8	Product search is slow	IN_PROGRESS	MEDIUM	3	dev1	Not allowed
9	Product image alignment broken on mobile	CLOSED	LOW	3	dev1	Not allowed
10	Test	OPEN	LOW	4	dev1	Not allowed

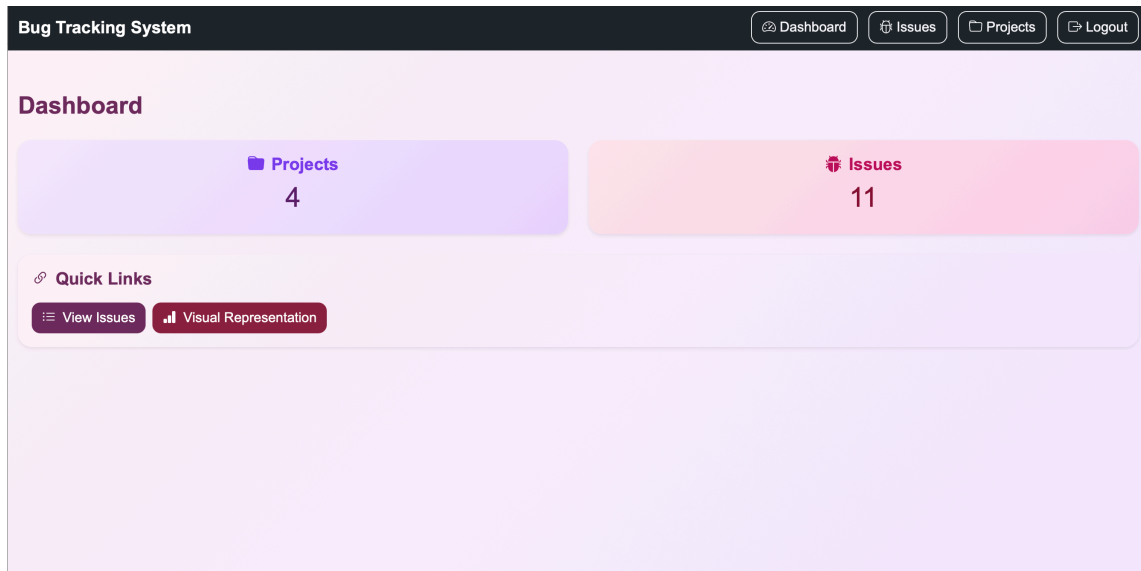

This screenshot shows the same "Update Issue Status" modal after the status has been successfully updated. A white toast message box appears in the center of the screen with the text "Issue status updated successfully." and a "Close" button. The modal's "New Status" dropdown remains set to "VERIFIED". The background table is the same as in the previous screenshot, but the "Update Status" button for issue ID 3 is no longer visible, indicating the status change was successful.
